PAPERGAMES

Checkers: first rules

Reading and applying rules

Open the game

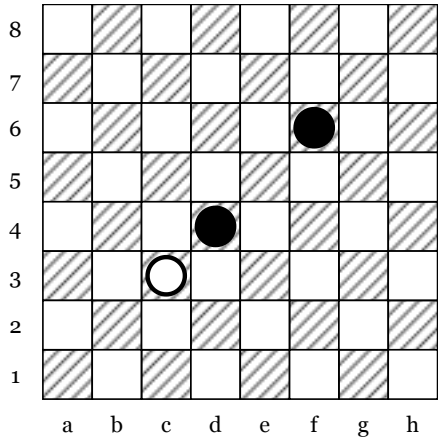

Name: _____

Goal: You learn the basic rules of checkers and think a multiple jump through.

Rules: The game is played on the dark squares of an 8 × 8 board. Pieces move diagonally forward to an empty square. If an opposing piece stands diagonally in front and the square behind it is empty, you jump over it and capture it. Capturing is compulsory, also several times in a row. A piece that reaches the last row becomes a king.

1. How many pieces does each player have at the start? On how many squares can pieces stand?

2. White to move (White moves up). Which pieces does the white piece on c3 capture, and on which square does it land?

3. What happens when a piece reaches the last row on the other side?

4. In task 2, may White make a different move instead? Explain.

In PaperGames you can choose English, German, Russian, Brazilian or Italian rules. These tasks work with all of them.

PAPERGAMES

Solutions for teachers

Checkers: first rules

---

1. Each player has 12 pieces. Pieces stand only on the 32 dark squares.
2. It captures d4 and lands on e5, then captures f6 and lands on g7. Two pieces are captured.
3. The piece becomes a king (turned over or crowned with a second piece).
4. No. Capturing is compulsory, and a multiple jump that has started is finished.
